This chapter aims to describe methodologies and techniques for de-embedding device measurements from extrinsic measurements by characterizing the parasitic network surrounding the intrinsic device, through the use of a three-dimensional (3D) physical model of the network and its electromagnetic (EM) analysis. The electromagnetic behavior is obtained employing 3D EM solvers and internal ports. In the first part, the de-embedding processes for field-effect transistor (FET) devices to be used for monolithic microwave integrated circuit designs are studied by four different approaches; in the second part of this chapter, the de-embedding of FET devices for hybrid circuit design purposes is described.

What is your hobby? Have you heard that question when you got learners? We believe that that problem was given by teacher with their students. Many kinds of hobby, All people has different hobby. And you also know that little person just like reading or as reading become their hobby. You need to know that reading is very important in addition to book as to be the point. Book is important thing to add you knowledge, except

your teacher or lecturer. You get good news or update in relation to something by book. Many kinds of books that can you choose to use be your object. One of them is niagra Microwave De-embedding: Chapter 8. Electromagnetic-Analysis-Based Transistor De-embedding and Related Radio-Frequency Amplifier Design.
