Xavier Domènech Antúnez

Fundamentos de química ambiental. Volumen I (Ciencias Químicas) (Spanish Edition) Xavier Domènech Antúnez

Esta obra aborda los fundamentos de la química ambiental, que abarca el comportamiento de los contaminantes en el medio ambiente, incluyendo todos los aspectos de su ciclo de vida, desde las fuentes que los generan, los procesos de transporte, las reacciones químicas, su reparto entre los distintos compartimentos o fases, así como los efectos producidos en los organismos, materiales y otros medios. El presente volumen se centra en la descripción de los procesos químicos que gobiernan los diferentes sistemas ambientales, con énfasis en la constitución química y la reactividad de los distintos compartimentos ambientales.

El texto va dirigido a alumnos de ciencias ambientales y química, pero también es útil en general para estudiantes de otros grados de ciencias, biociencias e ingenierías interesados en la temática de la contaminación ambiental, y que hayan seguido un curso universitario de química general.
