**Bonding Theory for Metals and Alloys** Frederick E. Wang

**Bonding Theory for Metals and Alloys** exhorts the potential existence of covalent bonding in metals and alloys. Through the recognition of the covalent bond in coexistence with the 'free' electron band, the book describes and demonstrates how the many experimental observations on metals and alloys can all be reconciled. Subsequently, it shows how the individual view of metals and alloys by physicists, chemists and metallurgists can be unified. The physical phenomena of metals and alloys covered in this book are: Miscibility Gap between two liquid metals; Phase Equilibrium Diagrams; Phenomenon of Melting. Superconductivity; Nitinol; A Metal-Alloy with Memory; Mechanical Properties; Liquid Metal Embrittlement; Superplasticity; Corrosion; The author introduces a new theory based on 'Covalon' conduction, which forms the basis for a new approach to the theory of superconductivity. This new approach not only explains the many observations made on the phenomenon of superconductivity but also makes predictions that have been confirmed.

- \* Openly recognizes the electrons as the most important and the only factor in understanding metals and alloys
- \* Proposes "Covalon" conduction theory, which carries current in covalent bonded pairs
- \* Investigates phase diagrams both from theoretical and experimental point of view

Do you like reading a book? Confuse to looking for your selected book? Or your book seemed to be rare? Why so many question for the book? But virtually any people feel that they enjoy intended for reading. Some people likes reading through, not only science book but novel and Bonding Theory for Metals and Alloys or maybe others sources were given understanding for you. After you know how the fantastic a book, you feel desire to read more and more. Science book was created for teacher or perhaps students especially. Those ebooks are helping them to add their knowledge. In some other case, beside science e-book, any other book likes Bonding Theory for Metals and Alloys to make your spare time more colorful. Many types of book like here.
