How could there be a major discovery for women's sexual pleasure that hasn't already been reported to death?

Well there is, and it's the "other" G-Spot.

You already know that most of the clitoris is actually inside the body, (two inches on average,) so you want to make sure the cliteris inside of you is being adequately stimulated.

You've read reports on how to find and stimulate the G-spot and you know that the G-spot is actually more

of a backdoor way to access the vast treasure trove of clitoral nerve endings versus being a separate collection of it's own nerves.

You've experimented with different sex toys until you've found one or more that you'll kill for.

You know all about nipple stimulation and who hasn't heard about anal sex?

Well there's still another major way for women to get sexual pleasure.

Often known as the other "G-Spot", this part of a woman's anatomy begs to be played with and offers the promise, or at least possibility, of more exciting sex.

Now in all fairness it should be added that not all women will benefit from this discovery, as is the case with the G-spot. But what if you're one of the many that can benefit from it and you go through life never knowing about it :(

Publisher's Note: This publication contains explicit sexual content.
