Partial Differential Equations of Mathematical Physics and Integral Equations (Dover Books on Mathematics) Ronald B. Guenther, John W. Lee

This book was written to help mathematics students and those in the physical sciences learn modern mathematical techniques for setting up and analyzing problems. The mathematics used is rigorous, but not overwhelming, while the authors carefully model physical situations, emphasizing feedback among a beginning model, physical experiments, mathematical predictions, and the subsequent refinement and reevaluation of the physical model itself.

Chapter 1 begins with a discussion of various physical problems and equations that play a central role in applications. The following chapters take up the theory of partial differential equations, including detailed discussions of uniqueness, existence, and continuous dependence questions, as well as techniques for constructing conclusions. Specifically, Chapters 2 through 6 deal with problems in one spatial dimension. Chapter 7 is a detailed introduction to the theory of integral equations; then Chapters 8 through 12 treat problems in more spatial variables. Each chapter begins with a discussion of problems that can be treated by elementary means, such as separation of variables or integral transforms, and which lead to explicit, analytical representations of solutions.

The minimal mathematical prerequisites for a good grasp of the material in this book are a course in advanced calculus, or an advanced course in science or engineering, and a basic exposure to matrix methods. Students of mathematics, physics, engineering, and other disciplines will find here an excellent guide to mathematical problem-solving techniques with a broad range of applications. For this edition the authors have provided a new section of Solutions and Hints to selected Problems. Suggestions for further reading complete the text.

From reader reviews:

Connie Bannister:

Nowadays reading books are more than want or need but also work as a life style. This reading habit give you lot of advantages. The huge benefits you got of course the knowledge the actual information inside the book that will improve your knowledge and information. The info you get based on what kind of publication you read, if you want have more knowledge just go with education books but if you want feel happy read one with theme for entertaining including comic or novel. The Partial Differential Equations of Mathematical Physics and Integral Equations (Dover Books on Mathematics) is kind of book which is giving the reader unforeseen experience.

Archie Williams:

The reason? Because this Partial Differential Equations of Mathematical Physics and Integral Equations (Dover Books on Mathematics) is an unordinary book that the inside of the publication waiting for you to snap this but latter it will surprise you with the secret this inside. Reading this book adjacent to it was fantastic author who also write the book in such amazing way makes the content on the inside easier to understand, entertaining means but still convey the meaning fully. So , it is good for you because of not hesitating having this nowadays or you going to regret it. This phenomenal book will give you a lot of positive aspects than the other book have got such as help improving your skill and your critical thinking means. So , still want to hold off having that book? If I were being you I will go to the publication store hurriedly.

Paula Salas:

This Partial Differential Equations of Mathematical Physics and Integral Equations (Dover Books on Mathematics) is completely new way for you who has attention to look for some information mainly because it relief your hunger details. Getting deeper you on it getting knowledge more you know or perhaps you who still having bit of digest in reading this Partial Differential Equations of Mathematical Physics and Integral Equations (Dover Books on Mathematics) can be the light food in your case because the information inside this particular book is easy to get by anyone. These books create itself in the form which can be reachable by anyone, yeah I mean in the e-book contact form. People who think that in guide form make them feel drowsy even dizzy this reserve is the answer. So there is no in reading a reserve especially this one. You can find what you are looking for. It should be here for anyone. So , don't miss the idea! Just read this e-book variety for your better life in addition to knowledge.

Gigi Brown:

Don't be worry in case you are afraid that this book will certainly filled the space in your house, you will get it in e-book way, more simple and reachable. That Partial Differential Equations of Mathematical Physics and Integral Equations (Dover Books on Mathematics) can give you a lot of buddies because by you

investigating this one book you have issue that they don't and make you more like an interesting person. This book can be one of a step for you to get success. This book offer you information that probably your friend doesn't recognize, by knowing more than additional make you to be great men and women. So , why hesitate? We need to have Partial Differential Equations of Mathematical Physics and Integral Equations (Dover Books on Mathematics).
